3132 CHANNEL DRIVE
JUNEAU, ALASKA 99811-2500

About the Cover

Lakina River Bridge

McCarthy Area, Alaska

The decked bulb-tee girder is one of Alaska's most common bridge superstructure elements. Over 400 of the bridges in the state use a pre-stressed concrete design that combines the girder and bridge deck into one piece. This accelerated bridge construction design allows for the rapid reopening of many of Alaska's isolated routes. Many of the decked bulb-tee girders are fabricated within Alaska.

Lakina River Bridge replaced the old steel truss in 2016 and was designed by the Alaska Department of Transportation's Bridge Section. This bridge uses 105'-8" long decked bulb-tee girders, steel H-piles at the abutments, and 3' diameter steel pipe piles at the piers. The bridge carries the Edgerton / McCarthy Road over the Lakina River.

Like many of the decked bulb-tee girder bridges in Alaska, it was designed in-house by the Alaska DOT&PF. The designer was Nick Murray and was checked by Leslie Daugherty. The summer aerial photo was taken by Jesse Escamilla during a routine bridge inspection.

INTRODUCTION

This bridge inventory report is a periodic publication by the Alaska Department of Transportation and Public Facilities, Bridge Section. Summarized within are structural, dimensional, and location data of bridges and culverts that are biennially inspected by the Bridge Section. Other bridge structures are included for reference and informational purposes. Bridge dimensions, minimum vertical clearances, minimum vertical underclearances and load postings are applicable at the time of publication, only. Each section is roughly organized starting in the northern most locations of the state.

An electronic copy is available online at <http://dot.alaska.gov/stwddes/desbridge/index.shtml>

Description of Terms, Codes, and Symbols

DESCRIPTION OF TERMS, CODES, AND SYMBOLS

ROUTE NUMBERS AND NAMES are given in the route listing section. If available, the coordinated data system (CDS) numbers are also listed.

BRIDGE NUMBERS AND NAMES are used by the Bridge Section to identify individual structures. The structures with a 4000 series bridge number designate large culverts that meet the definition of a bridge, having center line of roadway length greater than twenty (20) feet. Structures with a 7000 series bridge number designate culverts or bridges that are less than twenty (20) feet along center line and owned by DOT.

CDS ROUTE AND MILE POINT is the Coordinated Data System (CDS) highway route number and mileage location of each structure as recorded by the Alaska Department of Transportation and Public Facilities' Geographic Information Section

HISTORIC MILEPOST is the mileage from each actual or theoretical milepost.

LENGTH of each bridge is to the nearest foot, measured from back to back of the backwalls of the abutments.

WIDTH is measured to the nearest tenth of a foot and is the roadway width of the structure, or the distance between the curbs or rails.

VERTICAL CLEARANCE is recorded to the nearest hundredth of a foot. It is the distance from the bridge deck to the lowest obstruction over any part of the roadway width. Measurements indicated in this book are the reported clearances at the time of publication, only.

VERTICAL UNDERCLEARANCE is recorded to the nearest hundredth of a foot. It is the minimum distance from the roadway below the bridge to the lowest part of the structure. Measurements indicated in this book are the reported clearances at the time of publication, only.

LOAD POSTED signifies bridges that are load restricted at the time of publication, only. Contact DOT&PF's Commercial Vehicle Customer Service Center, 1-800-478-7636, for specific bridge related load posting details or restrictions.

YEAR BUILT is the year of original construction or reconstruction of a structure.

COMMENTS are remarks used internally by the Bridge Section to note special bridge conditions and observations.

STRUCTURE TYPE are standard abbreviations used by the Bridge Section to identify the main material and configuration of the superstructure.

DECK TYPE are standard abbreviations used to identify the main material of the deck.

WEARING SURFACE identifies the actual running surface on the structure's roadway.

DESCRIPTION OF TERMS, CODES, AND SYMBOLS (continued)

STRUCTURE TYPE

CODE SYMBOL

Cable Stayed Box Girder	CSBG
Concrete Arch	CA
Concrete Girder	CG
Concrete Slab	CS
Corrugated Metal Pipe, Multiplate, or Arch	CMP
Glued Laminated Timber Stringer	GTS
Orthotropic Steel Box Girder	OSBG
Post-tensioned Concrete Box Girder	PTCBG
Post-tensioned Concrete Bulb Tee	PTCBT
Prestressed Concrete Box Girder	PCBG
Prestressed Concrete Bulb Tee	PCBT
Prestressed Concrete Channel Girder	PCCG
Prestressed Concrete Double Tee	PCDT
Prestressed Concrete Girder	PCG
Prestressed Concrete Slab	PCS
Prestressed Concrete Triple Tee	PCTT
Prestressed Concrete Tube Section	PCTS
Rigid Frame Concrete	RFC
Roller Compacted Concrete	RCC
Steel Arch	SA
Steel Box Girder	SBG
Steel Deck Truss	SDT
Steel Plate Girder	SPG
Steel Pony Truss	SPT
Steel Railroad Flatcar	SRC
Steel Stringer	SS

(continued on next page)

STRUCTURE TYPE SYMBOLS (continued)

STRUCTURE TYPE

CODE SYMBOL

Steel Through Truss	STT
Suspension	S
Timber Arch	TA
Timber Deck Truss	TDT
Timber Pony Truss	TPT
Timber Stress Laminate	TSL
Timber Stringer	TS
Timber Through Truss	TTT
Treated Timber Arch	TTA
Treated Timber Deck Truss	TTDT
Treated Timber Pony Truss	TTPT
Treated Timber Stringer	TTS
Treated Timber Through Truss	TTTT

Listed below are additional suffixes that may be used to further describe structure types:

Continuous Bridge	C
Moveable Bridge	M

DECK TYPE CODE SYMBOL

Filled Steel Grid	FSG
Laminated Timber	LT
Precast Reinforced Concrete	PRC
Reinforced Concrete	RC
Steel Grid	SG
Steel Plate	SP
Timber (detail not known)	T
Timber Plank	TP
Timber Stress Laminate	TSL
Treated Timber Plank	TTP

Listed below are additional suffixes that may be used to further describe deck types:

Asphalt	A
Running plank	R
Treated (preservative treated)	T

Additional code symbols, such as LOG, SLAB, DOCK, or BULKHEAD are used and are self-explanatory. The term PIONEER denotes a primitive type of construction, usually a combination of logs and timber beams. BAILEY and ACROW denote a military or modular type of steel pony truss.

EXAMPLES:

SS/RC is a steel stringer bridge with a reinforced concrete deck.

TTS/TTPR is a treated timber stringer bridge with a treated timber planked deck with running plank.
